Roger,

It turns out that the best place to query our data is our newly updated ECHO website https://echo.epa.gov/ State folks like you get the same password access that I do. You simply have to register here https://echo.epa.gov/user/register

To do a query go to the Explore Facilities tab and choose evaluate compliance> all data. You can copy a list IDs from a spread sheet and under the Facility Characteristics drop down paste the IDs in the permit ID window.

Using your list to create an individual entries for all the IDs associated with facilities (some had multiple IDs). I did a query deselecting active in the search window to capture inactives too. That list of 77 not including the nons (I assume non reporters) generated 48 hits. I am attaching that table. When you get results, before downloading, use the button next to download to choose all the data fields you would like (e.g. date of last inspection, violatioins, etc).

It turns out that some of the Nons may be in our system. You can look them up based on address and/or name. I did that with one just to make sure the system works.

There are several reasons the number of facilities returned may be less than your list. At least 5 facilities have multiple RCRA IDs associated with that address. Also generally CAL IDs (California only waste facilities) are not tracked in RCRA Info. It turns out, however, that some facilities identified with a CAL ID should have a Federal ID and are in RCRA info since they generate RCRA waste. Still others are not included and do generate RCRA waste. They may be on the edge of being CESGs (below the federal threshold). For example CHRISTENSEN PLATING WORKS INC **CAL000329258** generates chrome in amounts that may make it subject to federal regulation but does not appear in ECHO and this may be because of the CAL ID or the waste amounts.

I am happy to go over this in more detail any time.

Chuck

Good morning!
Please see the attached list with facility numbers. Hope this makes the searching easier.
Thanks
Roger

> Yes! They cannot do the data the way you included it in the document. Please create a clearly delineated column with the facility ID. They can search that way.
